EXPERIENCE

Mojave Payment Technologies

September 2023 - Present

Software Developer - Unattended Solutions and Mobile

Drove company to success in distributing Unattended Kiosk Solutions to partners. Worked with numerous technologies from React and Node to deliver fast kiosk solutions for Tizen OS. Built scalable backends and API endpoints to manage Kiosk information with Laravel and MySQL. Managed a windows based POS system for merchants using PHP. Worked on developer operations by maintaining and provisioning new instances for in-house and partner applications on AWS and OCI. Migrated .NET Framework APIs, services and web applications to .NET Core. Wide range of experience with integrations for DataCap, ChargeAnywhere, NMI, Google and Apple Pay, Monetra, etc. Built applications from the ground up using modern technologies with Laravel, Livewire and Volt to deliver fast unique experiences to customers looking to advance in the payment space.

ICP DAS USA

Septemeber 2021 - August 2023

Web Developer - Marketing Team

Lead the company to success by bringing new ideas to the marketing team strategy. Improved the website with SEO enriched text. Increased production quality on website content in forms of text, pictures and video. Integrated new technology to the website for automation and data visualization for marketing performance reports. Adopted industry standard methodologies to improve the development team's workflow. Lead and managed the development team through numerous projects. Managed an offsite server that hosted the website and 3 other website for organizations the company owned.

Accomplishments:

- Created APIs and scripts to automate and track leads from form submissions to multiple locations: emails, our CRM platform, the content management system.
- Lead the team forward and implemented a new design for the website.
- Integrated many APIs to help improve the companies sales and provide value to the marketing team to create intelligent content for social media and website. APIs include: Google Maps, Keap, Twitter, Facebook, Zoom, Amazon, and more.

EDUCATION

University of Nevada Las Vegas

2013 - 2019

Bachelors of Science - Computer Science

Accomplishments:

- Senior Design Competition candidate and built a particle engine for Andreas Stefik's evidence-based prog language, Quorum. Project was named Quark

Nucamp Bootcamp

2020 - 2021

9 month Full Stack Web Development Program with an emphasis on Bootstrap, React, React Native, NodeJS and Express.

Accomplishments:

- Built a personal project, Tea Era (teaera.jkbrow.dev)

NOTABLE PROJECTS

MaxReps

maxreps.one

A fitness tracker application built with Laravel, Inertia, React.

Successor to an old project of mine that was built with the MERN stack

HoneyBeeKiosk

honeybeekiosk.com

A Kiosk application built with React and Express and compiled down to Tizen. Project heavily relied on supported technologies prior to Chromium v65. It interacts with a backend portal built with Laravel to configure customized options on the application itself.
